SkillGuard for **Utilities**

Pricing

SkillGuard for Utilities pricing is very simple.

For the standard system (which is all that most companies will ever need), there is just one price component: an annual cost for each worker record paid for by their primary employer.

One Simple Annual Cost

This cost is managed through an annual subscription and costs £27.00 per recordholder, paid for by their primary employer.

As well as delivering all standard functionality covering the worker's activities for 12 months, this price also gives employing companies access to a variety of analysis and views, as well as standard reporting.

Attendance at our training webinars as well as access to our wide range of support materials and online user support/chat are included in the above.

Extras

The standard system includes a virtual smartcard stored on the individual's smartphone in our secure wallet, Vircarda.

Clients wanting physical smartcards for any members of their workforce can order and pay for these on SkillGuard for £5.50 each.

There is also a range of optional bolt-on modules and features that companies can opt to include for an extra charge. Currently these are:

- **PAC**: integrated physical access control solution.
- **API**: although access to our API is available at no cost, there is a consumption charge made depending on the volume or requests and updates made.
- **Power BI Analytics:** the system has integrated Power BI analytics using a wide range of views directly from SkillGuard data. Updates are made 4 times daily to keep analysis current.

Please contact us for a tailored price confirmation for any of these additional modules.

CPI

Pricing is reviewed annually and adjusted for CPI.

VAT to be added to all prices quoted.
