

A Reference Point Solution

By protecting your workforce, we protect you

SkillGuard is the global, market-leading mobile workforce solution for organisations looking to protect their teams 24/7. Using the best, trusted technology, SkillGuard delivers and captures real-time critical information when and where it is needed to enable protected crews and lone workers to be effective and safe – wherever they work.

Keeping **3 Million +**
Workers Safe

Safer Sites

Full implementation of our solutions typically drives down Accident Frequency Rates (AFR) by ensuring that all workers have authority to work today – their qualifications, occupational health status, recent working hours and much more.

Cost Savings

As our solution leads to safer sites and projects, this cuts costs. SkillGuard is an enterprise/ corporate solution, so the savings are significant. One client who analysed cost savings at just one location stated that implementing SkillGuard saved them more than £70,000 on one site, in one year. Another major client estimates the cost saving by their cut in AFR across their business to be over £5 million per annum.

Additionally, our clients tell us that by implementing SkillGuard, they enjoy higher retention rates with their supply chains, benefitting from a more stable and trained workforce. Using our technology also means a reduction in the delivery of duplicate events (e.g. inductions and other briefings) as – at a glance – site supervisors can confirm what the operative already holds.

Protecting **25,000**
Organisations Globally

Reduced Risk

SkillGuard reduces the risk of unsafe work delivered by unqualified, untrained or fatigued workers. It also prevents suspended workers from accessing sites and provides real-time control. All of this means fewer incidents, more productivity, greater efficiency on projects, as well as everyone home safe and well.

Greater Efficiency

Implementing SkillGuard means you have all the critical information about your entire workforce (including the entire supply chain) in one place and it's all available when and where you need it. As workers move around the supply chain and arrive on site, they carry their up-to-date credentials on an encrypted smartcard (physical or virtual), so they can be securely and rapidly authenticated – even if it is their first time on a site. This means getting the workforce started quickly and safely, with no need to check any other records – everything you need is on SkillGuard.

SkillGuard at a glance

- Powerful, cloud-based online database of the entire workforce (including supply chain).
- Smart technology so that data can be retrieved even when mobile comms are unavailable.
- SkillGuard holds all qualifications and competencies, plus certificates.
- Accurate, real-time information, providing reliable worker "authority to work".
- Controlled access and authentication where it's needed: projects, sites - even zones.
- OH requirements and recent D&A tests are also covered, including any work restrictions.
- Full transferability and movement- employment, sponsors and worker associations across the system.
- Forthcoming and actual expiries are readily accessible so that renewals can be easily arranged.
- SkillGuard has an integrated physical access control component to be used with turnstiles, barriers.
- MySkillGuard – gives workers access to their own record and provides transparency.
- Industry standard two-way API to enable data to be passed to and from third party systems.
- Trusted circle of users - including approved training providers and OH providers when required.
- Wide range of user roles and powerful dashboards, so that users see only what they need.
- View swipe data in table format or using geomaps for geographical insight into your workforce's distribution.
- Crew function to create advance team building and credential checks before work starts.
- CSCS - and partner schemes – card credentials can be checked electronically and competencies transferred and updated online to the worker's SkillGuard record and smartcard.
- High security individual worker smartcard (physical or virtual) - kept up to date electronically.
- All required information is available in one, trusted and secure place.
- Site-delivered events – inductions, briefings and toolbox talks – are captured electronically.
- Elimination of unnecessary, duplicate training events.
- Sites and zones can have entry requirements to restrict access even further.
- Fatigue management as standard, including travel time.
- Send targeted messages to your entire workforce, including your supply chain. Add buttons and links to gather responses for audit purposes.
- All card swipe activity is logged and auditable, including spot checks, shifts worked, access denied.
- With Linked Schemes, critical data can be shared across our many systems to prevent double shifting.
- Secure, online payment where the financial model is subscription-based.
- Verification functionality for clients wanting to use this extra step before qualifications are valid.
- Sophisticated hierarchy makes SkillGuard effective for sector or industry wide solutions, as well as major individual corporations.
- The SkillGuard app makes it easy for your workforce's smartcards to be checked and authenticated wherever they might be.
- A fully compliant system which makes it easy for you to comply with GDPR and other data protection laws.
- Ad hoc and pre-defined reports as well as extensive data views across the system.

Future thinking.
